

Demolition Certificate of Approval  
Supplemental Application (Misc. Resource/Accessory Structure)

City Architectural and Historic Resource Designation: \_\_\_\_\_

Age of Resource/Date of Construction: Not sure large oak tree - thus a long time

Describe the physical features of the resource:

Please see attached arborist letter and photos for more detail. Live oak tree on right side of property. There are two oaks growing next to one another. The tree @ risk is the small one of the 2. The one @ risk is possibly harming the larger oak tree.

Explain why, in detail, the resource is to be removed:

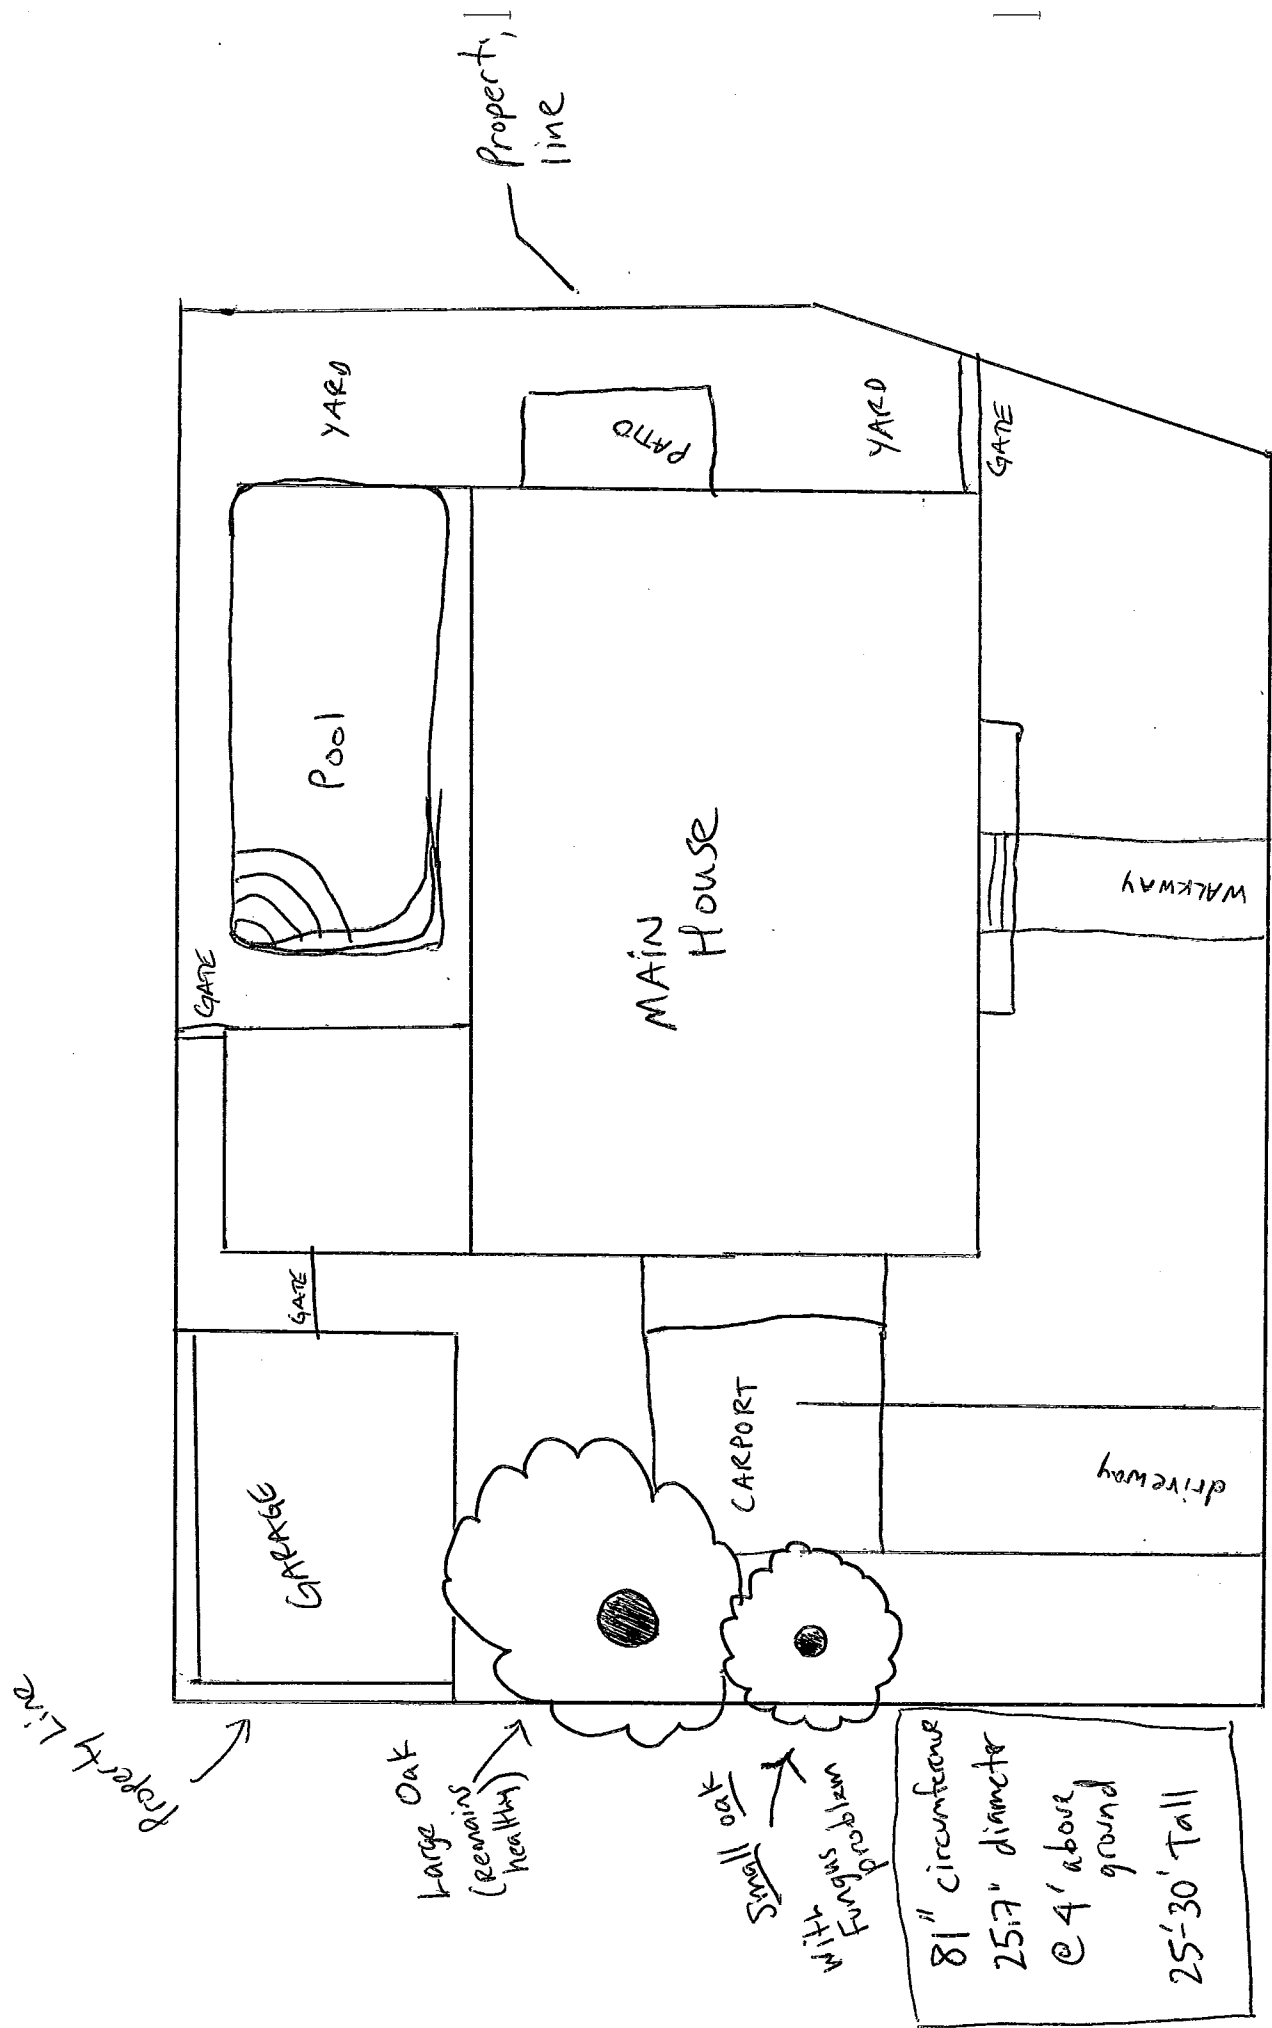

Please see attached photos and letter from arborist. The live oak has a large area of decay that has affect the trees root system. The arborist believes the tree is @ risk of falling if remains on the property.

What are the proposed plans for the site after the removal of the resource:

We plan to plant other plants and trees in this area but they will be small in size.

Submittal Requirements:

- 1. Color photographs of the resource
- 2. Site Plan
- ✓ 3. Arborist Report, if appropriate
- 4. Inspector's Report, if appropriate

1234 Hawthorne Street  
ALAMEDA, CA 94501

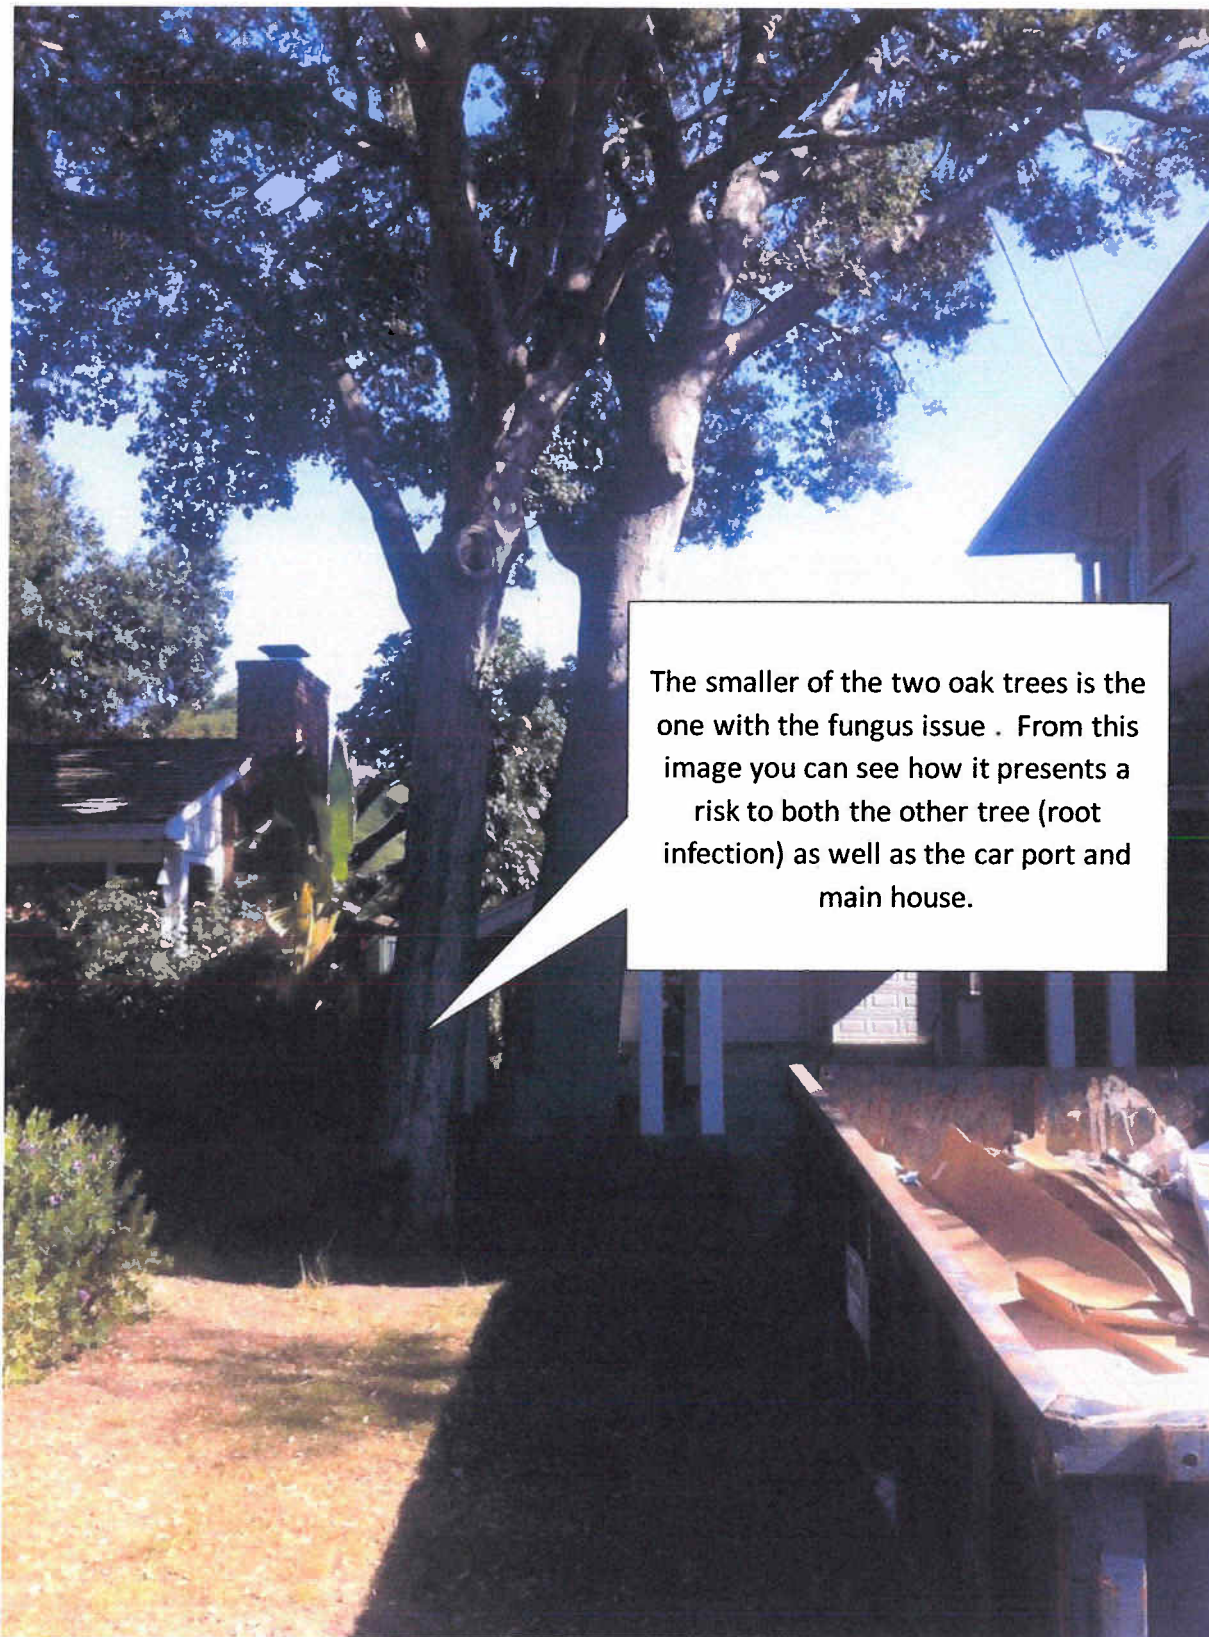

The fungus infection starts from the roots of the tree and extends about 6-7 feet up from the ground.

The fungus has deteriorated a significant amount of the roots and is spreading up the tree.

The smaller of the two oak trees is the one with the fungus issue . From this image you can see how it presents a risk to both the other tree (root infection) as well as the car port and main house.
